

Course Management System

The diagram is a class diagram in the Unified Modeling Language (UML), and it shows the relationships between different classes in a system, including their attributes, methods, and associations. Here's what I have made from the diagram:

Classes:

System User: This class represents a user of the system. It has attributes like username and password.

Admin: This class represents an administrator of the system. It has methods like Add Course, AddModule, and GenerateReport.

Report: This class represents a report that can be generated by the system. It has attributes like student progress and course enrollment.

Student: This class represents a student who uses the system. It has attributes like name, ID, age, and address.

Instructor: This class represents an instructor who teaches courses in the system. It has attributes like name and contact information.

Course: This class represents a course that students can enroll in. It has attributes like a name and ID.

Module: This class represents a module within a course. It has attributes like a name and ID.

Address: This class represents the address of a student or instructor. It has attributes like province, district, and postal code.

Attributes:

Each class has attributes, which are essentially its properties. For example, the Student class has attributes like name, ID, age, and address.

Methods:

Classes also have methods, which are actions they can perform. For example, the Admin class has methods like AddCourse, AddModule, and GenerateReport.

Associations:

The lines between the classes represent associations. These show how the classes are related to each other. For example, the association between the Student and Course classes indicates that a student can enroll in a course.

Here are some additional details about the relationships between the classes:

A Student can enroll in one or more Courses.

A Course can have one or more Modules.

A Module belongs to one Course.

An Instructor can teach one or more Courses.

A Course can be taught by one or more Instructors.

A Student has one Address.

An Instructor has one Address.

Screenshot of databases:

The first screenshot shows a MySQL Workbench window with the 'courses' table selected in the 'coursemanagementsystem' database. The query is `SELECT * FROM coursemanagementsystem.courses;` and the result grid shows three rows of course data.

course_id	course_name
1	BSc. Computer Science
2	BSc. Information Technology
3	BSc. Computer Engineering

The second screenshot shows the same MySQL Workbench window with the 'instructors' table selected. The query is `SELECT * FROM coursemanagementsystem.instructors;` and the result grid shows three rows of instructor data.

instructor_id	instructor_name	instructor_email	instructor_password	instructor_phone
1	Subash Bista	subash@gmail.com	subash@123	1234567890
2	Aashina Thapaliya	aashina@gmail.com	aashina@123	1234567890
3	Sajag Silwal	sajag@gmail.com	sajag@123	123456789

Below the result grid, the 'Output' tab shows a log of database actions and their durations.

#	Time	Action	Message	Duration / Fetch
9	16:23:20	SELECT * FROM coursemanagementsystem.students LIMIT 0, 1000	1 row(s) returned	0.000 sec / 0.000 sec
10	16:28:03	SELECT * FROM coursemanagementsystem.results LIMIT 0, 1000	5 row(s) returned	0.000 sec / 0.000 sec
11	16:32:21	SELECT * FROM coursemanagementsystem.admin LIMIT 0, 1000	3 row(s) returned	0.000 sec / 0.000 sec
12	16:33:08	SELECT * FROM coursemanagementsystem.students LIMIT 0, 1000	5 row(s) returned	0.016 sec / 0.000 sec
13	16:33:37	SELECT * FROM coursemanagementsystem.instructors LIMIT 0, 1000	3 row(s) returned	0.000 sec / 0.000 sec
14	16:33:44	SELECT * FROM coursemanagementsystem.instructors LIMIT 0, 1000	3 row(s) returned	0.000 sec / 0.000 sec
